PRODUCTION HALLS, SALZBURG

Hall temperature control / air conditioning incl. machine extraction systems for 3 production halls at Pichler & Strobl GmbH.

The customised overall concept was perfectly tailored to the production requirements and ensures an optimum hall climate, clean air and maximum energy efficiency.

Six Verso RHP 52 ventilation units with a reinforced base frame for 17,500m³/h were supplied, together with various ducts & fittings, spiro pipes and suction elements.

The installation was carried out by Reder Systems during ongoing operations. Due to the limited space, the planning and installation required the utmost precision.

The result: a healthy and pleasant working environment that increases both the productivity and well-being of the employees.
